## PROFESSIONAL SUMMARY

---

Data Analyst with 2.5+ years at Tata Consultancy Services (BFSI domain), specializing in SQL-driven reporting, ETL pipelines, and regulatory analytics on the TCS BaNCS platform. Delivered 25+ operational and compliance reports, resolved 50+ production data issues within SLA, and maintained 99%+ accuracy across 50K+ policy records. Recognized with three TCS awards — including the Xcelerate Warrior Award and two 2026 recognitions — for performance, compliance, and project excellence.

## EXPERIENCE

---

### Data Analyst | Tata Consultancy Services

Oct 2023 – Present

BFSI Domain | TCS BaNCS | SQL · Power BI · Python · ETL · Excel

- Performed EDA on 50K+ policy records, surfacing trends that drove business decisions and improved reporting accuracy across quarterly cycles.
- Developed and maintained 25+ SQL-based operational and regulatory reports, enabling BI and compliance reporting for internal stakeholders.
- Ensured 99%+ data accuracy through rigorous validation, cleansing, and reconciliation workflows across multiple source systems.
- Optimized 15+ production SQL queries — reducing average processing time by 30% — through index tuning, query restructuring, and elimination of redundant joins.
- Resolved 50+ production data issues within SLA, safeguarding downstream reporting and client-facing deliverables.
- Designed and executed end-to-end ETL pipelines supporting data movement across source systems in the BFSI environment.
- Built and maintained Power BI MIS dashboards for KPI tracking, enabling real-time performance monitoring for business leads.
- Automated repetitive reporting tasks using Power Query, significantly reducing manual effort and turnaround time.
- Translated complex business requirements into efficient, reusable SQL reporting logic with minimal rework across stakeholder iterations.

## PROJECTS

---

### Lending Club Loan Portfolio Analytics → [View Project](#)

End-to-end BFSI credit risk analytics — Python · SQL · SQLite · Power BI

- Engineered 225K+ loan records using Python (Pandas, NumPy) — built default flags, risk tiers, DTI bands, recovery rate, and employment stability features from raw data.
- Developed 10 analytical SQL queries covering portfolio KPIs, default rate by grade, state-wise performance, and DTI band risk segmentation.
- Built 3-page interactive Power BI dashboard with 15+ KPIs; identified Grade G loans default at 40.43% vs 3.36% for Grade A — a 12x risk differential across the portfolio.
- Derived insight that DTI 30–40 borrowers default at 15.92% — nearly double low-DTI borrowers — supporting debt burden as a key credit risk predictor.

### Customer Shopping Behavior Analysis → [View Project](#)

Solo end-to-end retail analytics project — Python · SQL · Power BI

- Analyzed 5K customer records and engineered customer value metrics from 3.9K cleaned records.

- Developed a 6-KPI Power BI dashboard (Revenue: \$256K, AOV: \$65, Repeat Rate: 97%), uncovering that non-discounted orders drove 57% of revenue.
- Delivered insights to improve customer retention and profitability.

**IPL Analytics Dashboard** → [View Project](#)

*Ball-by-ball match analytics across teams, players, and seasons — SQL · Tableau*

- Built calculated fields for strike rate, boundaries, wickets, and phase-wise scoring trends; published interactive dashboard on Tableau Public.
- Used SQL for player-, team-, and venue-level analytics, with filters enabling season-by-season performance comparisons.
